Subject Index of Volumes 49 and 50

Band description
  exciton vs., of absorption, luminescence and electro-absorption of poly(phenylphenylenevinylene) and poly(dodecylthiophene), 341
Band fillings
  search for photoinduced absorption in materials with non-one-half, 469
Band structure
  and physical properties of organic conductor (BEDT-TTF)$_4$Cu(C_2O_4)$_2$, 253
Bipolarons
  Raman characterization of polarons, and solitons in conducting polymers, 335
Brownian oscillator analysis
  of femtosecond pump–probe spectroscopy of polydiacetylene, 71

Carbon
  electroabsorption studies of undoped C_{60} thin films, 557
  optical characterization of excited states in films of undoped C_{60}, 549
  photoluminescence in solid films of, 531
  tight-binding theory in C_{60}, 175
β-Carotene
  gap states of I-doped, 77
Charge-carrier generation
  exciton fusion and, in poly(di-n-hexylsilane), 387
  photoinduced, and transport in thin-film polydiacetylene single crystals, 439
Charge-conducting symmetry
  ODMR of polarons and, in conducting polymers, 481
Charge density wave
  thermal activation of photoinduced defects in intermediate strength quasi-one-dimensional, solid; PtBr, 99
Conducting polymers
  decay mechanisms of photoexcitations in, probed by picosecond photoinduced absorption, 611
  measurements of $\chi^{(3)}(\omega; \omega, -\omega, \omega)$ in, at $\lambda = 620$ nm, 13
  ODMR of polarons and charge-conducting symmetry in, 481
  ODMR studies of; overview, 621
  photoexcitation of spin states in, studied by spin-dependent photomodulation technique, 647
  Raman characterization of polarons, bipolarons and solitons in, 335
  triplet polaronic excitons in; X-band optically detected magnetic resonance (ODMR) study, 473
Conductivity
  of poly(2,5-dibutoxy*para*phenyleneacetylene), 447
Conjugated polymers(s)
  effect of topological defects and site impurities in, chains, 221
  microscopic theory of third-harmonic generation and electro-absorption in, 1
  nonlinear optical probes of, 21
  photothermal deflection spectroscopy of, 91
  picosecond waveguide modulation in, 147
  searching for low-band-gap, by LHS calculations, 537
  static and dynamic third-order susceptibilities in; Hückel theory and VEH approach, 37
  triplet states and optical absorptions in finite polyenes and, 631
  ultrafast relaxation in, with large optical nonlinearity, 565
Copper
  band structure and physical properties of organic conductor (BEDT-TTF)$_4$Cu(C_2O_4)$_2$, 253

Damping
  frequency dependence of two-photon resonance and, in polymers, 141
Decay mechanisms
  of photoexcitations in conducting polymers probed by picosecond photoinduced absorption, 611

Defects
effect of topological, and site impurities in conjugated polymer chains, 221
influence of conditions of solid state formation on optical spectra and concentration of, in polyacetylene, 203
Degenerate ground state
frequency dependence of third-harmonic generation in *cis*- and *trans*-polyacetylene; importance of, to nonlinear optical response, 49
Dynamics
of photogenerated soliton pairs in polyacetylene, 603

Electric field effects
on Wannier excitons in polydiacetylenes and their contribution to third-order susceptibility, 655
Electroabsorption
exciton vs. band description of absorption, luminescence and, of poly(phenylphenylenevinylene) and poly(dodecylthiophene), 341
microscopic theory of third-harmonic generation and, in conjugated polymers, 1
in polydiacetylene, 517
in polydiethynylsilane and soluble *trans*-$(CH)_x$, 509
of undoped C_{60} thin films, 557
Electronic structure(s)
of polysilanes, 367
of push–push and pull–pull conjugated systems, 181
semi-empirical SCF calculations of geometrical and, of quasi-particles in polyacetylene, 231
of seven poly(di-alkylsilanes), 499
Electronic system
resonating Hartree–Fock theory of one-dimensional, 239
Electronic transport
time-resolved studies of, in Si and Ge backbone polymers, 395
Energy dissipation
via radiative recombination and vibronic relaxation in σ-delocalized Si backbone network polymers, 407
Excitation energy dependence
of photoluminescence from self-trapped excitons in halogen-bridged mixed-valence Pt complexes, 117
Excited states
optical characterization of, in films of undoped C_{60}, 549
Excited stationary states
of small polarons, 267
Exciton(s)
vs. band description of absorption, luminescence and electro-absorption of poly(phenylphenylenevinylene) and poly(dodecylthiophene), 341
excitation energy dependence of photoluminescence from self-trapped, in halogen-bridged mixed-valence Pt complexes, 117
nonlinear spectroscopy on one-dimensional, in conjugated polymer polydiacetylenes, 123
Exciton fusion
and charge-carrier generation in poly(di-n-hexylsilane), 387
Exciton–phonon systems
optical nonlinearity in coupled, near metal surfaces, 167

Fluorescence
time-resolved, of polyaniline, 159
Frequency dependence
of third-harmonic generation in *cis*- and *trans*-polyacetylene; importance of degenerate ground state to nonlinear optical response, 49
of third-order nonlinear susceptibilities in polyarylenevinylene thin films, 131
of two-photon resonance and damping in polymers, 141
Fullerene
resonant Raman scattering study of undoped, thin films, 543

Gap states
of I-doped β-carotene, 77
Gel chromism
and anomalous luminescence in poly(3-alkylthiophene), 491
Geometric structure
of push–push and pull–pull conjugated systems, 181
semi-empirical SCF calculations of, of quasi-particles in polyacetylene, 231
Germanium
time-resolved studies of electronic transport in Si and Ge backbone polymers, 395

Halide complexes
optical properties of MX chain materials; extended Peierls–Hubbard model, 109
Hartree–Fock theory
resonating, of one-dimensional electronic system, 239
Hole burning
anomalous, in polymers with inhomogeneous broadening, 683
Hückel theory
static and dynamic third-order susceptibilities in conjugated polymers, and VEH approach, 37
(Hyper)polarizabilities
in infinite polymers; saturation problem, 211

Iodine
gap states of I-doped β-carotene, 77

Leucoemeraldine base
vibrational analysis of reduced form of polyaniline, 525
Longuet-Higgins and Salem
searching for low-band-gap conjugated polymers by LHS calculations, 537
Luminescence
exciton vs. band description of absorption, and electro-absorption of poly(phenylphenylenevinylene) and poly(dodecylthiophene), 341
gel chromism and anomalous, in poly(3-alkylthiophene), 491
and picosecond photoinduced absorption of polyaniline, 423

Magnetic resonance experiments
on undoped and doped poly(*para*-phenylene), 261
Metal surfaces
optical nonlinearity in coupled exciton–phonon systems near, 167
Microscopic theory
of third-harmonic generation and electro-absorption in conjugated polymers, 1
Molecular aggregates
optical absorption of, under influence of coloured noise, 195

Nonlinear spectroscopy
on one-dimensional excitons in conjugated polymer polydiacetylenes, 123

Optical absorption(s)
of molecular aggregates under influence of coloured noise, 195
of poly(2,5-dibutoxy*para*phenyleneacetylene), 447
triplet states and, in finite polyenes and conjugated polymers, 631
Optical absorption spectra
and polarons for three-dimensional *trans*-polyacetylene, 245
Optical bandgaps
from *ab initio* methods; examination of singlet–triplet approximation, 353
Optical characterization
of excited states in films of undoped C_{60}, 549
Optical material
theoretical structural characterization of polydiethynylsilane; new nonlinear, 293
Optical nonlinearity
in coupled exciton–phonon systems near metal surfaces, 167
ultrafast relaxation in conjugated polymers with large, 565
Optical probes
nonlinear, of conjugated polymers, 21
picosecond and c.w., of polydiacetylene at high pressure, 583
of polydiethynylsilanes, 453
Optical properties
geometric and electronic structure and non-linear, of push–push and pull–pull conjugated systems, 181
linear, of series of linear polyenes; implications for polyacetylene, 271
of MX chain materials; extended Peierls–Hubbard model, 109
quantum lattice motion and, of polyenes, 83
ultrafast non-linear, and photoinduced relaxation dynamics of poly(2,5-thienylenevinylene), 429
vacuum UV spectroscopy of, and electronic structure of seven poly(dialkylsilanes), 499
Optical response
frequency dependence of third-harmonic generation in *cis*- and *trans*-polyacetylene; importance of degenerate ground state to nonlinear optical response, 49
Optical spectra
influence of conditions of solid state

formation on, and concentration of defects in polyacetylene, 203
Optical susceptibility
resonance enhancement effect in nonlinear, of polysilanes, 415
Optically detected magnetic resonance (ODMR)
of conducting polymers; overview, 621
of novel poly(2,5-dibutoxy*para*phenyleneacetylene), X-band, 447
of polarons and charge-conducting symmetry in conducting polymers, 481
triplet polaronic excitons in conducting polymers; X-band, 473
Organic conductor
band structure and physical properties of, $(BEDT\text{-}TTF)_4Cu(C_2O_4)_2$, 253

Peierls–Hubbard model
optical properties of MX chain materials; extended, 109
Phase transitions
photoinduced bidirectional, in single crystals of polydiacetylenes, 675
Photoexcitation(s)
decay mechanisms of, in conducting polymers probed by picosecond photoinduced absorption, 611
dynamics of, in polyacetylene; picosecond transient Raman scattering, 329
of spin states in conducting polymers studied by spin-dependent photomodulation technique, 647
Photoinduced absorption
decay mechanisms of photoexcitations in conducting polymers probed by picosecond, 611
luminescence and picosecond, of polyaniline, 423
search for, in materials with non-one-half band fillings, 469
subpicosecond, in poly[2,5-thienylene vinylene] and poly[3-methoxy-6-(2-ethyl-hexyloxy) phenylene vinylene], 593
Photoinduced charge-carrier generation and transport in thin-film polydiacetylene single crystals, 439
Photoinduced defects
thermal activation of, in intermediate strength quasi-one-dimensional charge density wave solid; PtBr, 99
Photoinduced relaxation dynamics
ultrafast non-linear optical properties and, of poly(2,5-thienylenevinylene), 429
Photoluminescence
excitation energy dependence of, from self-trapped excitons in halogen-bridged mixed-valence Pt complexes, 117
of poly(2,5-dibutoxy*para*phenyleneacetylene), 447
in solid films of C_{60}, 531
Photomodulation spectroscopy
of soluble polyacetylene, 461
Photothermal deflection spectroscopy
of conjugated polymers, 91
Physical properties
of organic conductor $(BEDT\text{-}TTF)_4Cu(C_2O_4)_2$, 253
Platinum complexes
excitation energy dependence of photoluminescence from self-trapped excitons in halogen-bridged mixed-valence, 117
thermal activation of photoinduced defects in intermediate strength quasi-one-dimensional charge density wave solid; PtBr, 99
Polaron(s)
excited stationary states of small, 267
ODMR of, and charge-conjugation symmetry in conducting polymers, 481
optical absorption spectra and, for three-dimensional *trans*-polyacetylene, 245
Raman characterization of, bipolarons and solitons in conducting polymers, 335
Polaron transport
interchain, in *trans*-polyacetylene, 359
Polaronic excitons
triplet, in conducting polymers; X-band optically detected magnetic resonance (ODMR) study, 473
Polyacetylene
dynamics of photoexcitations in; picosecond transient Raman scattering, 329
dynamics of photogenerated soliton pairs in, 603
electroabsorption in polydiethynylsilane and soluble *trans*-$(CH)_x$, 509
frequency dependence of third-harmonic generation in *cis*- and *trans*-polyacetylene; importance of degenerate ground state to nonlinear optical response, 49

influence of conditions of solid state formation on optical spectra and concentration of defects in, 203
interchain polaron transport in *trans*-polyacetylene, 359
linear optical properties of series of linear polyenes; implications for, 271
optical absorption spectra and polarons for three-dimensional *trans*-polyacetylene, 245
photomodulation spectroscopy of soluble, 461
picosecond photoinduced transient resonant Raman scattering in *cis*-rich polyacetylene, 321
semi-empirical SCF calculations of geometrical and electronic structures of quasi-particles in, 231
Poly(3-alkylthiophene)
gel chromism and anomalous luminescence in, 491
Polyaniline
luminescence and picosecond photoinduced absorption of, 423
time-resolved fluorescence of, 159
vibrational analysis of reduced form of; leucoemeraldine base, 525
Polyarylenevinylene(s)
frequency dependence of third-order nonlinear susceptibilities in, thin films, 131
vibrational properties of, 305
Polydiacetylene(s)
Brownian oscillator analysis of femtosecond pump–probe spectroscopy of, 71
electric field effects on Wannier excitations in, and their contribution to third-order susceptibility, 655
electroabsorption in, 517
femtosecond two-photon absorption and Raman resonances in, yellow solutions, 187
nonlinear spectroscopy on one-dimensional excitons in conjugated polymer, 123
photoinduced bidirectional phase transitions in single crystals of, 675
photoinduced charge-carrier generation and transport in thin-film, single crystals, 439
picosecond and c.w. optical probes of, at high pressure, 583
picosecond transient Raman scattering in, 4-BCMU films, 313
spectroscopic studies of; Raman evidence for surface phases on single crystals, 281
Poly(di-alkylsilanes)
vacuum UV spectroscopy of optical properties and electronic structure of seven, 499
Poly(2,5-dibutoxy*para*phenyleneacetylene)
conductivity, optical absorption, photoluminescence, and X-band optically detected magnetic resonance of novel PDBOPA, 447
Polydiethynylsilane(s)
electroabsorption in, and soluble *trans*-$(CH)_x$, 509
optical probes of, 453
theoretical structural characterization of; new nonlinear optical material, 293
Poly(di-n-hexylsilane)
exciton fusion and charge-carrier generation in, 387
Poly(dodecylthiophene)
exciton vs. band description of absorption, luminescence and electroabsorption of, 341
Polyenes
linear optical properties of series of linear; implications for polyacetylene, 271
quantum lattice motion and optical properties of, 83
triplet states and optical absorptions in finite, and conjugated polymers, 631
unified picture of three models for resonance Raman effect in, 665
Polymers
anomalous hole burning in, with inhomogeneous broadening, 683
frequency dependence of two-photon resonance and damping in, 141
(hyper)polarizabilities in infinite; saturation problem, 211
Poly[3-methoxy-6-(2-ethyl-hexyloxy)phenylene vinylene]
subpicosecond photoinduced absorption in, 593
Poly(*para*-phenylene)
magnetic resonance experiments on undoped and doped, 261
Poly(phenylphenylenevinylene)
exciton vs. band description of absorp-

tion, luminescence and electroabsorption of, 341
Polysilanes
resonance enhancement effect in nonlinear optical susceptibility of, 415
solution photophysics and electronic structure of, 367
Poly[2,5-thienylene vinylene]
subpicosecond photoinduced absorption in, 593
ultrafast non-linear optical properties and photoinduced relaxation dynamics of, 429
Polythiophenes
interpreting dispersion of $\chi^{(3)}(-3\omega; \omega, \omega, \omega)$ of, 59
Pump–probe spectroscopy
Brownian oscillator analysis of femtosecond, of polydiacetylene, 71
Push–push and pull–pull conjugated systems
geometric and electronic structure and nonlinear optical properties of, 181

Quantum lattice motion
and optical properties of polyenes, 83
Quasi-particles
semi-empirical SCF calculations of geometrical and electronic structures of, in polyacetylene, 231

Raman characterization
of polarons, bipolarons and solitons in conducting polymers, 335
Raman evidence
spectroscopic studies of polydiacetylenes; for surface phases on single crystals, 281
Raman resonances
femtosecond two-photon absorption and, in polydiacetylene yellow solutions, 187
Resonance enhancement effect
in non-linear optical susceptibility of polysilanes, 415
Resonance Raman effect
unified picture of three models for, in polyenes, 665
Resonant Raman scattering study
of undoped fullerene thin films, 543

Saturation problem
(hyper)polarizabilities in infinite polymers, 211
Semi-empirical SCF calculations
of geometrical and electronic structures of quasi-particles in polyacetylene, 231
Silicon
energy dissipation via radiative recombination and vibronic relaxation in σ-delocalized Si backbone network polymers, 407
time-resolved studies of electronic transport in Si and Ge backbone polymers, 395
Singlet–triplet approximation
optical bandgaps from *ab initio* methods; examination of, 353
Site impurities
effect of topological defects and, in conjugated polymer chains, 221
Solid state formation
influence of conditions of, on optical spectra and concentration of defects in polyacetylene, 203
Soliton pairs
dynamics of photogenerated, in polyacetylene, 603
Solitons
Raman characterization of polarons, bipolarons and, in conducting polymers, 335
Solution photophysics
and electronic structure of polysilanes, 367
Spectroscopic studies
of polydiacetylenes; Raman evidence for surface phases on single crystals, 281
Spin-dependent photomodulation technique
photoexcitation of spin states in conducting polymers studies by, 647
Spin states
photoexcitation of, in conducting polymers studies by spin-dependent photomodulation technique, 647
Structural characterization
theoretical, of polydiethynylsilane; new nonlinear optical material, 293
Surface phases
spectroscopic studies of polydiacetylenes; Raman evidence for, on single crystals, 281

Tetrathiafulvalene
band structure and physical properties of organic conductor (BEDT-TTF)$_4$Cu(C_2O_4)$_2$, 253

Thermal activation
of photoinduced defects in intermediate strength quasi-one-dimensional charge density wave solid; PtBr, 99
Third-harmonic generation
frequency dependence of, in *cis*- and *trans*-polyacetylene; importance of degenerate ground state ot nonlinear optical response, 49
microscopic theory of, and electroabsorption in conjugated polymers, 1
Third-order nonlinear susceptibilities
frequency dependence of, in polyarylenevinylene thin films, 131
Third-order optical nonlinearity
interpreting dispersion of $\chi^{(3)}(-3\omega; \omega, \omega, \omega)$ of polythiophenes, 59
Third-order susceptibility
measurements of $\chi^{(3)}(\omega; \omega, -\omega, \omega)$ in conducting polymers at $\lambda = 620$ nm, 13
static and dynamic, in conjugated polymers; Hückel theory and VEH approach, 37
Tight-binding theory
of C_{60}, 175
Time-resolved studies
of electronic transport in Si and Ge backbone polymers, 395
Transient photoinduced resonant Raman scattering
picosecond TPRRS
dynamics of photoexcitations in polyacetylene, 329
in polydiacetylene 4-BCMU films, 313
in *cis*-rich polyacetylene, 321
Transition metal complexes
optical properties of MX chain materials; extended Peierls–Hubbard model, 109
Triplet states
and optical absorptions in finite polyenes and conjugated polymers, 631
Two-photon absorption
femtosecond, and Raman resonances in polydiacetylene yellow solutions, 187
Two-photon resonance
frequency dependence of, and damping in polymers, 141

Ultrafast relaxation
in conjugated polymers with large optical nonlinearity, 565

Vacuum UV spectroscopy
of optical properties and electronic structure of seven poly(di-alkylsilanes), 499
Valence effective Hamiltonian
static and dynamic third-order susceptibilities in conjugated polymers; Hückel theory and VEH approach, 37
Vibrational analysis
of reduced form of polyaniline; leucoemeraldine base, 525
Vibrational properties
of poly(arylene vinylene)s, 305
Vibronic relaxation
energy dissipation via radiative recombination and, in σ-delocalized Si backbone network polymers, 407

Wannier excitons
electric field effects on, in polydiacetylenes and their contribution to third-order susceptibility, 655
Waveguide modulation
picosecond, in conjugated polymers, 147
